

General Ledger (csGL)

Automated GL Processing

General Ledger makes the process of updating a general ledger with financial data virtually effortless. The csGL process presents essential information in customized formats needed to satisfy any accounting system requirements. This product outputs a structure that can be imported by any GL application with reconciliation back to billing system reports. csGL is rules driven, so revenue data will always be booked consistently with validation controls verifying data integrity.

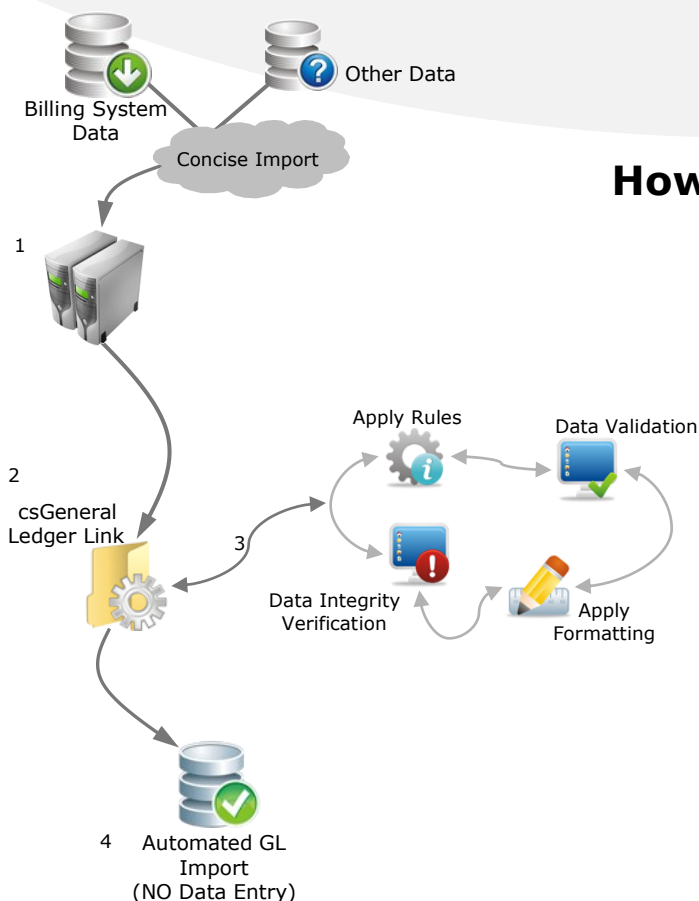

csGeneral Ledger Link Highlights

- Highly **scalable** to support many needs.
- **PC-based** providing financial data right on your desktop.

How it works

Our processes are designed to add efficiency to your work, not force you to change the way you work. If you're not pleased with the processes you currently follow, we can work with you to establish new processes complimentary to your objectives.

1. Concise extracts information from billing systems or other sources.
2. Data is imported into a csMart.
3. Business rules are applied.
4. Data is summarized then loaded it into a workbooks or another format of choice.

Contact our sales team for a no obligation trial demo today to see the value of csGL.
