

PPV Express (csPPVxpress)

Simplified Pay-Per-View Processing

csPPVxpress is an invoicing workbook providing the Pay-Per-View (PPV) information needed to efficiently pay distributors. Utilizing the power of standard desktop spreadsheet applications, spreadsheets are delivered in a useable format that can be sent directly to PPV distributors / suppliers.

csPPVxpress summarizes PPV information necessary to pay distributors, calculates Video on Demand fees, and creates general ledger journal entries for revenue and/or expense. csPPVxpress also produces several other analysis reports, such as buy rates, which can be summarized at system and MSO levels.

NOTE: csPPVxpress uses monthly data from PPV distributors like iNDemand matching movie titles to MSO event transactions to provide expense, revenue, and invoicing information to PPV distributors.

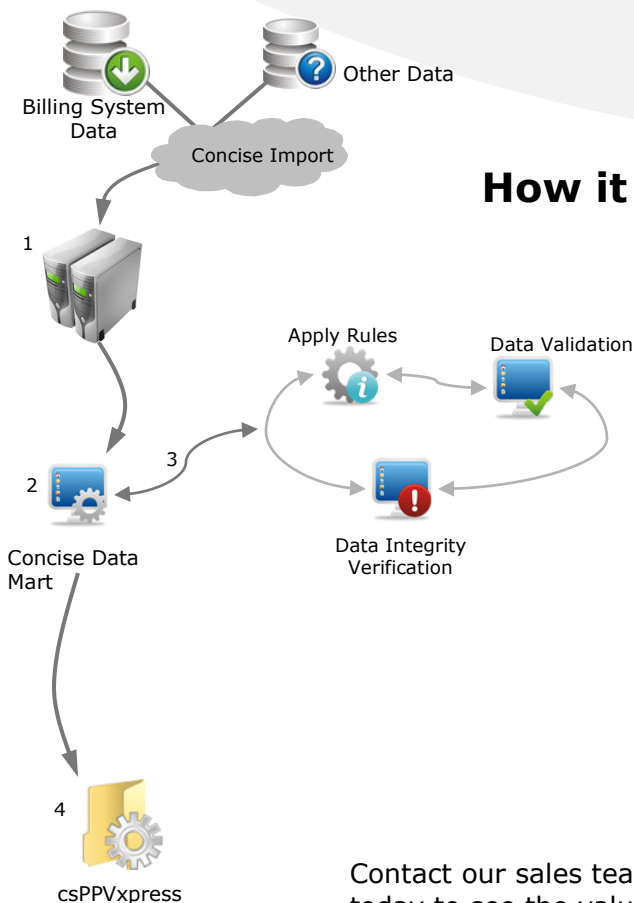

csPPVxpress Highlights

Core Features:

- Validate PPV amounts to billing system reports.
- Easily adjust any event or movie field.
- Easily transmit distributor data files quickly and efficiently.
- Analyze PPV buys with cross reference reports.
- Cost rules to determine PPV dues.
- An exception worksheet used to adjust distributor criteria.

Benefits:

- **Reduce time** spent compiling information from financial reports or custom report writers.
- **Increase accuracy** by eliminating recording errors or confusion due to conflicting or missing information.
- **Increase efficiency** by supplying the most accurate and up-to-date invoice(s) or file(s) to each PPV distributor.
- Billing system independent.
- Output distributor data into any format.

How it works

Our innovative processes are designed to add efficiency to your work, not force you to change the way you work. If you're not pleased with the processes you currently follow, we can work with you to establish new processes complementary to your objectives.

1. Concise extracts billing system Event Definition and PPV report data with distributor information.
2. Data is imported into a Concise Data Mart.
3. Business rules are applied.
4. Data is summarized then loaded it into a formatted Excel workbook.
